SKILLS - PYTHON DEVELOPER | AI & MACHINE LEARNING | NLP

Languages: Python (Advanced), C/C++, Cython, JavaScript

AI & Machine Learning Frameworks: TensorFlow, PyTorch, Scikit-learn, Hugging Face, OpenAI APIs, Google APIs, LangChain

Natural Language Processing (NLP): Text Preprocessing, Named Entity Recognition (NER), Sentiment Analysis, Prompt Engineering

Web Frameworks: FastAPI, Flask, Streamlit, React, Express (Node.js)

Developer Tools: Linux (Ubuntu), Bash, Git/GitHub, VS Code, PyCharm, Docker, SQLAlchemy, MySQL Workbench, Jupyter Notebook

EDUCATION

Master of Computer Applications (AI/ML) | Amity University | Greater Noida | 2026

Bachelor of Computer Applications | GGSIPU | New Delhi | 2024 | 9.2

EXPERIENCE

Python LLM Trainer | Turing | California, USA | August 2024 - April 2025

Turing advances frontier AI and builds real-world systems for Fortune 500 companies, governments, and the world's leading AI labs.

- **LLM Fine-Tuning and RLHF on Python and SQL Tasks:** Developed and fine-tuned LLMs using Reinforcement Learning with Human Feedback (RLHF) on Python and SQL datasets, implementing custom reward models, tuning policy optimization algorithms, and conducting iterative model evaluations to maximize alignment with human feedback.
- **General Reasoning Model Training (Human-Like Chain-of-Thought Reasoning):** Trained models to replicate human-like reasoning by decomposing complex problems into structured chains of thought, designing step-by-step solution pathways to improve logical coherence, multi-step inference capabilities, and human-aligned decision making.
- **Supervised Dataset Generation for Python Developer Workflows:** Captured and annotated Python development workflows using a GUI trainer, systematically recording task sequences and providing reasoning-based annotations to generate structured datasets for supervised fine-tuning and behavior modeling.

Python Developer | Allobulls | Pune, India | August 2023 - August 2024

AlgoBulls is an algorithmic trading platform that provides AI-driven strategies for retail investors.

- **Cython Optimization for Trading Algorithms:** Automated repetitive tasks and streamlined workflows using Bash scripting, reducing manual intervention and improving time efficiency by 30%.
- **Data Analysis and Visualization Proficiency:** Advanced proficiency in NumPy, Pandas, and data visualization tools (e.g., Matplotlib, Seaborn) for data analysis, statistical modeling, and insightful visualizations.
- **Trading Code Performance Boost:** Optimized trading algorithms with Cython, accelerating execution speed by 150% to support high-frequency, revenue-generating trades.

PROJECT

SQL Chatbot with LangChain and LLM Integration | Personal

- Developed an interactive chatbot using **LangChain** and **Streamlit**, enabling natural language queries to interact with SQL databases, enhancing user experience through intuitive, conversational interfaces.
- **AI-Powered SQL Query Generation with Llama3-8b-8192:** Integrated **Llama3-8b-8192** via **ChatGroq API**, leveraging advanced NLP capabilities to generate intelligent, context-aware SQL queries based on user inputs, improving query accuracy and efficiency.
- **Database Flexibility with Multi-Engine Support:** Implemented seamless support for both **SQLite** and **MySQL**, allowing dynamic and flexible database connections to cater to varying project needs and provide scalable query solutions.

Flora Sense: Plant Solution | Personal | github.com/satyamverma21/FloraSense.git

- **Plant Species Identification:** Integrated **Plant.id API** for real-time, accurate plant species identification, enhancing user engagement and fostering botanical interest.
- **Plant Disease Detection:** Developed a disease detection system to identify early symptoms, enabling proactive intervention and improving plant health.
- **Responsive User Interface:** Built a responsive, user-friendly interface using **Flask**, **Jinja**, and **Tailwind CSS** for seamless plant identification and disease detection.
- **Technologies Used:** Python, **Flask**, **Jinja HTML**, **Tailwind CSS**, **JavaScript**, **Plant.id API**, **Render** hosting.

Algo-Trading | Personal | github.com/satyamverma21/AlgoTrading.git

- Built a Python project using the **Alpha Vantage API** for stock analysis and signal generation to aid trading decisions.
- **Buy/Sell Signal Generation:** Used **moving averages** to identify buy and sell signals, improving the effectiveness of trading strategies.
- **Data Handling and Visualization:** Applied **Python** to manipulate and visualize stock data, making insights easy to understand.
- **Accessible Jupyter Notebook Application:** Showcased the model in a **Jupyter Notebook**, providing an easy-to-use tool for traders of all experience levels.
